

WHITE INK SETUP GUIDE

Print Layer

White Ink Layer

How to prepare white ink files?

We strongly recommend creating the file in illustrator and saved as a layered PDF.

1. After you create your artwork (as a vector in CMYK), duplicate the layer and label it **white ink**.
2. In the **white ink** layer, change any objects that require white ink or a white ink base to 100% Magenta (CMYK: 0, 100, 0, 0)

TIPS

No ink will be printed for any object in the artwork set to white, and the colour of the substrate will be seen.

White Layer - Print File

Printed Outcome

To print transparent to colour gradients, the gradient in the white layer must be set to 100% magenta and the section to be transparent set to 0% opacity
